

Commonly Used Distributions

Lecture 9

Topics in this lecture

- Commonly used discrete distributions
- Commonly used continuous distributions

Discrete Distributions

- Bernoulli
- Binomial
- Geometric
- Poisson

Bernoulli Distribution

Notation	$X \sim \text{Bernoulli}(p)$
PMF	$p_X(x) = \begin{cases} p & , x = 1 \\ 1 - p & , x = 0 \\ 0 & , \text{otherwise} \end{cases}$
Mean	$\mu_X = p$
Variance	$\sigma_X^2 = p(1 - p)$

Binomial Distribution

Notation	$X \sim \text{Binomial}(n, p)$
PMF	$p_X(x) = \begin{cases} \binom{n}{x} p^x (1-p)^{n-x} & , x \in \{0, 1, 2, \dots, n\} \\ 0 & , \text{otherwise} \end{cases}$
Mean	$\mu_X = np$
Variance	$\sigma_X^2 = np(1-p)$

Binomial Distribution

PMF of Binomial(10,0.25)

Histogram of samples drawn from Binomial(10,0.25)

Geometric Distribution

Notation	$X \sim \text{Geometric}(p)$
PMF	$p_X(x) = \begin{cases} p(1-p)^{x-1} & , x \in \{1, 2, 3, \dots\} \\ 0 & , \text{otherwise} \end{cases}$
Mean	$\mu_X = \frac{1}{p}$
Variance	$\sigma_X^2 = \frac{1-p}{p^2}$

Geometric Distribution

PMF of Geometric(0.25)

Histogram of samples drawn from Geometric(0.25)

Poisson Distribution

Notation	$X \sim \text{Poisson}(\lambda)$
PMF	$p_X(x) = \begin{cases} \frac{\lambda^x}{x!} e^{-\lambda} & , x \in \{0, 1, 2, \dots\} \\ 0 & , \text{otherwise} \end{cases}$
Mean	$\mu_X = \lambda$
Variance	$\sigma_X^2 = \lambda$

Poisson Distribution

PMF of Poisson(4)

Histogram of samples drawn from Poisson(4)

Continuous Distributions

- Uniform
- Exponential
- Normal

Uniform Distribution

Notation	$X \sim \text{Uniform}(a, b)$
PDF	$f_X(x) = \begin{cases} \frac{1}{b-a} & , a < x < b \\ 0 & , \text{otherwise} \end{cases}$
Mean	$\mu_X = \frac{a+b}{2}$
Variance	$\sigma_X^2 = \frac{(b-a)^2}{12}$

Uniform Distribution

PDF of Uniform(-5,5)

Histogram of samples drawn from Uniform(-5,5)

Exponential Distribution

Notation	$X \sim \text{Exp}(\lambda)$
PDF	$f_X(x) = \begin{cases} \lambda e^{-\lambda x} & , x \geq 0 \\ 0 & , \text{otherwise} \end{cases}$
Mean	$\mu_X = \frac{1}{\lambda}$
Variance	$\sigma_X^2 = \frac{1}{\lambda^2}$

Exponential Distribution

PDF of Exp(2)

Histogram of samples drawn from Exp(2)

Normal Distribution

Notation	$X \sim \mathcal{N}(\mu, \sigma^2)$
PDF	$f_X(x) = \begin{cases} \frac{1}{\sqrt{2\pi}\sigma} e^{-(x-\mu)^2/2\sigma^2} & , \quad -\infty < x < \infty \\ 0 & , \text{ otherwise} \end{cases}$
Mean	$\mu_X = \mu$
Variance	$\sigma_X^2 = \sigma^2$

Normal Distribution

PDF of $N(5,9)$

Histogram of samples drawn from $N(5,9)$

Normal Curve

Image Source: Dan Kernler, https://en.wikipedia.org/wiki/File:Empirical_Rule.PNG

Standard Normal

- Normal population with mean 0 and standard deviation 1
- Converting normal population with mean μ and standard deviation σ to a standard normal population

$$z = \frac{x - \mu}{\sigma}$$

- This value is called the “z-score” of x

Standard Normal Table

Standard Normal Probabilities

- For standard normal

$$P(Z \leq z) = \Phi(z)$$

Table entry for z is the area under the standard normal curve to the left of z .

- For $X \sim \text{Normal}(\mu, \sigma^2)$

$$\begin{aligned} P(X \leq x) &= P\left(\frac{X - \mu}{\sigma} \leq \frac{x - \mu}{\sigma}\right) \\ &= P\left(Z \leq \frac{x - \mu}{\sigma}\right) \\ &= \Phi\left(\frac{x - \mu}{\sigma}\right) \end{aligned}$$

Example 1

- Aluminum sheets used to make beverage cans have thickness (in mm) that are normally distributed with mean 10 and standard deviation 1.3. A particular sheet is 10.8 mm thick. Find the z-score
- The thickness of a certain sheet has a z-score of -1.7. Find the thickness of the sheet in the original units of mm.

Example 2

- Find the area under the normal curve to the left of $z = 0.47$

Standard Normal Probabilities

Table entry for z is the area under the standard normal curve to the left of z .

25th-percentile : $z \approx -0.675$

50th-percentile : $z = 0$

⇒ Probability and Statistics 9: Commonly used distributions

Example 4

- Lifetime of batteries in a certain application are normally distributed with mean 50 hours and standard deviation 5 hours. Find the probability that a randomly chosen battery lasts between 42 and 52 hours

$$X \sim \mathcal{N}(50, 25)$$

$$P(42 < X < 52) = P\left(\frac{42 - 50}{5} < Z < \frac{52 - 50}{5}\right)$$

$$= P(-1.6 < Z < 0.4)$$

$$P(-1.6 < Z < 0.4) = P(Z \leq 0.4) - P(Z \leq -1.6)$$

$$= \Phi(0.4) - \Phi(-1.6)$$

$$= 0.6554 - (1 - 0.9452)$$

$$= 0.6006$$

- A process manufactures balls whose diameters are normally distributed with mean 2.50 cm and standard deviation 0.008 cm. Specifications call for the diameter to be in the interval 2.5 ± 0.01 cm. What proportion of the balls will meet the specification?

$$X \sim \mathcal{N}(2.50, 0.008^2)$$

$$P(2.49 < X < 2.51)$$

$$= P\left(\frac{2.49 - 2.50}{0.008} < Z < \frac{2.51 - 2.50}{0.008}\right)$$

$$= P(-1.25 < Z < 1.25)$$

$$= \Phi(1.25) - \Phi(-1.25)$$

$$= \Phi(1.25) - (1 - \Phi(1.25))$$

$$= 0.8944 - (1 - 0.8944) = 0.7888$$
